Business Performance Report

Retail & Supermarkets

Dataset
retail.csv

Reporting period
2026-01-03 to 2026-02-02

Generated
29 Oct 2026, 19:41 India Standard Time

Prepared from the currently uploaded dataset and active column mappings. No external data or AI-generated analysis is used.

Executive Summary

This report summarizes retail.csv for Retail & Supermarkets. The uploaded file contains 3 rows and 8 columns; 3 rows are in the selected analysis range.

Key findings

Highest recorded product — “Tea” has the highest summed mapped revenue among 2 product group(s), using rows with both a label and valid numeric value.

Lowest recorded product — “Cake” has the lowest summed mapped revenue among 2 product group(s). This ranks recorded values only and does not establish a cause.

Monthly trend — Monthly totals are summed from rows with valid mapped dates and numeric values. Recorded values: Jan 26: 150; Feb 26: 200. Month completeness is not established by the file.

Period-over-period change — Recorded revenue increased from 150 to 200. The compared months are adjacent recorded months; completeness of either month is unknown.

Revenue and cost — Total revenue is 350 and total cost is 190, using the active mapped values. This comparison does not imply why costs were incurred.

Dataset overview

Detail	Value
Business category	Retail & Supermarkets

Calculated profit · Profit	160 Selected date range	Revenue less cost per row, using “Revenue” and “Cost” on 3 matching rows.
Calculated profit margin · Profit margin	45.71% Selected date range	Calculated from 3 rows with valid revenue and cost values.

Recommendations & Data Quality

Potential actions to consider

Suggested action	Evidence basis
Potential action: review the records and business context for “Cake,” the lowest recorded product by mapped revenue. The figures alone do not explain its performance.	Lowest recorded product: Cake (50).

Data quality and limitations

Data-quality item	Details
Missing cells	0
Exact duplicate rows retained	0
Completely blank rows	0
Returns	Map a returns column to calculate this metric.
Discounts	Map a discount column to calculate this metric.

Potential actions are prompts for review, not guaranteed outcomes. Validate the source records and business context before making decisions.
